

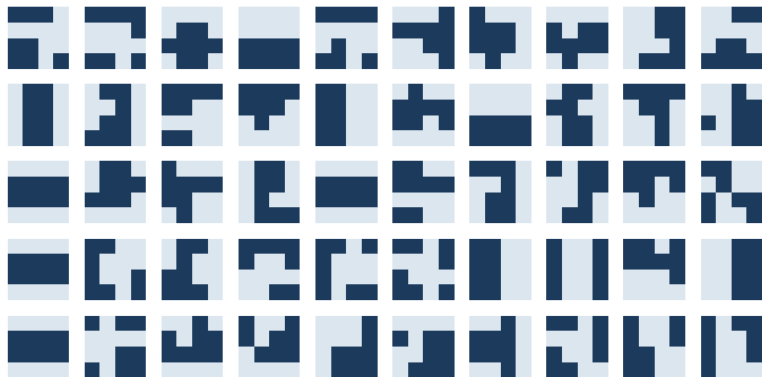

Figure 8 – fixed-magnetisation Ising, 4×4: every sample lands on the constraint surface

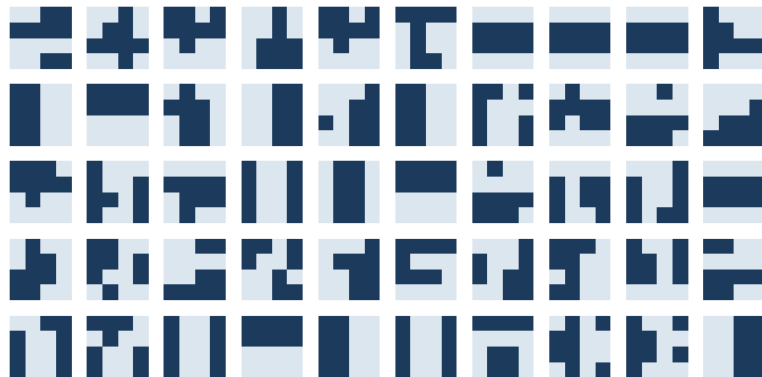

ours – 50 sampled configurations

$$\sum_i s_i = 0 \text{ for all 50 (range 0..0)}$$

TV vs exact 0.0496, 0 violations over 20,000 samples

exact enumeration – 50 draws from π

$$\sum_i s_i = 0 \text{ for all 50 (range 0..0)}$$

12,870 admissible states out of $2^{16} = 65,536$
